understands the role of the cell wall in the cell wall. The cell wall is a structure that surrounds the cell and is made of cellulose. It is a thick, rigid layer that provides structural support and protection to the cell. The cell wall is also involved in the transport of materials in and out of the cell. The cell wall is a complex structure that is made of many different components, including cellulose, hemicellulose, and pectin. The cell wall is a dynamic structure that can change in response to environmental conditions. The cell wall is a key component of the plant cell and is essential for the plant's survival.
